

### **CLIC6 Polyclonal Antibody**

Catalog No: YT0966

**Reactivity:** Human; Rat; Mouse;

**Applications:** WB;ELISA

Target: CLIC6

Gene Name: CLIC6

**Protein Name:** Chloride intracellular channel protein 6

Human Gene Id: 54102

**Human Swiss Prot** 

No:

**Mouse Swiss Prot** 

No:

Immunogen:

Q8BHB9

**Q96NY7** 

The antiserum was produced against synthesized peptide derived from human

CLIC6. AA range:411-460

**Specificity:** CLIC6 Polyclonal Antibody detects endogenous levels of CLIC6 protein.

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

**Dilution:** WB 1:500 - 1:2000. ELISA: 1:40000. Not yet tested in other applications.

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

**Observed Band:** 75kD

#### **Background:**

chloride intracellular channel 6(CLIC6) Homo sapiens This gene encodes a member of the chloride intracellular channel family of proteins. The gene is part of a large triplicated region found on chromosomes 1, 6, and 21. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Nov 2015],

#### **Function:**

domain:Members of this family may change from a globular, soluble state to a state where the N-terminal domain is inserted into the membrane and functions as chloride channel. A conformation change of the N-terminal domain is thought to expose hydrophobic surfaces that trigger membrane insertion.,function:May insert into membranes and form chloride ion channels. May play a critical role in water-secreting cells, possibly through the regulation of chloride ion transport.,PTM:Phosphorylated.,similarity:Belongs to the chloride channel CLIC family.,similarity:Contains 1 GST C-terminal domain.,subcellular location:Predominantly cytoplasmic. Upon chloride ion efflux from the cell, it is translocated to the plasma membrane.,subunit:Interacts with dopamine receptors DRD2, DRD3 and DRD4.,tissue specificity:Expressed in brain, placenta, pancreas and liver.,

# Subcellular Location:

Cytoplasm . Cell membrane ; Single-pass membrane protein . Predominantly cytoplasmic. Upon chloride ion efflux from the cell, it is translocated to the plasma membrane (By similarity). .

**Expression :** Expressed in brain, placenta, pancreas and liver.

**Sort**: 4282

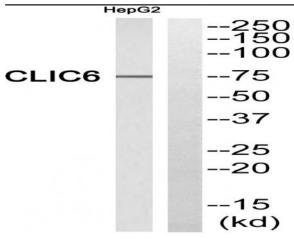

No4: 1

**Host:** Rabbit

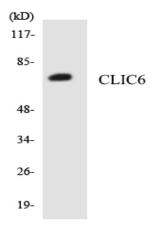

Modifications: Unmodified
