

COL4A5 Polyclonal Antibody

Catalog No: YT1028

Reactivity: Human; Mouse

Applications: IHC;IF;WB;ELISA

Target: COL4A5

Fields: >>PI3K-Akt signaling pathway;>>Focal adhesion;>>ECM-receptor

interaction;>>Relaxin signaling pathway;>>AGE-RAGE signaling pathway in

diabetic complications;>>Protein digestion and

absorption;>>Amoebiasis;>>Human papillomavirus infection;>>Pathways in

cancer;>>Small cell lung cancer

Gene Name: COL4A5

Protein Name: Collagen alpha-5(IV) chain

P29400

Human Gene Id: 1287

Human Swiss Prot

No:

Immunogen: The antiserum was produced against synthesized peptide derived from human

Collagen IV alpha5. AA range:21-70

Specificity: COL4A5 Polyclonal Antibody detects endogenous levels of COL4A5 protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500-2000 IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:10000. Not yet

tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 160kD

Background: This gene encodes one of the six subunits of type IV collagen, the major

structural component of basement membranes. Mutations in this gene are associated with X-linked Alport syndrome, also known as hereditary nephritis. Like the other members of the type IV collagen gene family, this gene is organized in a head-to-head conformation with another type IV collagen gene so that each gene pair shares a common promoter. Alternatively spliced transcript variants

have been identified for this gene. [provided by RefSeq, Aug 2010],

Function : disease:Defects in COL4A5 are the cause of Alport syndrome X-linked (APSX)

[MIM:301050]. APSX is characterized by progressive glomerulonephritis, renal failure, sensorineural deafness, specific eye abnormalities (lenticonous and macular flecks), and glomerular basement membrane defects. The disorder shows considerable heterogeneity in that families differ in the age of end-stage renal disease and the occurrence of deafness., disease: Deletions covering the N-terminal regions of COL4A5 and COL4A6, which are localized in a head-to-head manner, are the cause of diffuse leiomyomatosis with Alport syndrome (DL-ATS) [MIM:308940]; also known as esophageal and vulval leiomyomatosis with nephropathy or Alport syndrome and diffuse leiomyomatosis (ATS-DL). DL-ATS

process involving smooth muscle cells, mostly of the esophagus,

Subcellular Location:

Secreted, extracellular space, extracellular matrix, basement membrane.

is the combination of AS and diffuse leiomyomatosis (DL). DL is a tumorous

Expression: Isoform 2 is found in kidney.

Sort : 1371

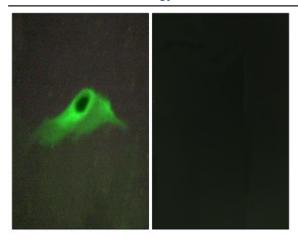

No3: ab231957

No4:

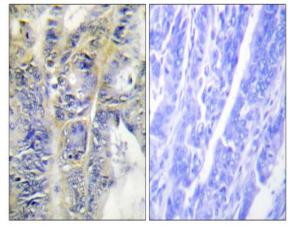

Host: Rabbit

Modifications: Unmodified
