

Sgo2 Polyclonal Antibody

| | |
|------------------------------|---|
| Catalog No : | YT4276 |
| Reactivity : | Human;Mouse |
| Applications : | IHC;IF;ELISA |
| Target : | Sgo2 |
| Gene Name : | SGOL2 |
| Protein Name : | Shugoshin-like 2 |
| Human Gene Id : | 151246 |
| Human Swiss Prot No : | Q562F6 |
| Mouse Swiss Prot No : | Q7TSY8 |
| Immunogen : | The antiserum was produced against synthesized peptide derived from human SGOL2. AA range:681-730 |
| Specificity : | Sgo2 Polyclonal Antibody detects endogenous levels of Sgo2 protein. |
| Formulation : | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. |
| Source : | Polyclonal, Rabbit,IgG |
| Dilution : | IHC 1:100 - 1:300. ELISA: 1:10000.. IF 1:50-200 |
| Purification : | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. |
| Concentration : | 1 mg/ml |
| Storage Stability : | -15°C to -25°C/1 year(Do not lower than -25°C) |
| Molecularweight : | 145kD |

Background : function:During meiosis, protects centromeric cohesion complexes until metaphase II/anaphase II transition, preventing premature release of meiosis-specific REC8 cohesin complexes from anaphase I centromeres. Is thus essential for an accurate gametogenesis (By similarity). May act by targeting PPP2CA to centromeres, thus leading to cohesin dephosphorylation.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,sequence caution:Contaminating sequence. Potential poly-A sequence.,similarity:Belongs to the shugoshin family.,subcellular location:In Hela cells, localizes at centromeres throughout prophase until metaphase and disappears at anaphase.,subunit:Directly interacts with PPP2CA.,

Potential poly-A sequence.,similarity:Belongs to the shugoshin family.,subcellular location:In Hela cells, localizes at centromeres throughout prophase until metaphase and disappears at anaphase.,subunit:Directly interacts with PPP2CA.,

Subcellular Location : Nucleus . Chromosome, centromere . Chromosome, centromere, kinetochore . During meiosis I, accumulates at centromeres during diplotene, and colocalizes differentially with the cohesin subunits RAD21 and REC8 at metaphase I centromeres (By similarity). SGO2 and RAD21 change their relative distributions during telophase I when sister-kinetochore association is lost (By similarity). During meiosis II, it shows a striking tension-dependent redistribution within centromeres throughout chromosome congression during prometaphase II, as it does during mitosis (By similarity). In Hela cells, localizes at centromeres throughout prophase until metaphase and disappears at anaphase (PubMed:17485487). Centromeric localization requires the presence of BUB1 and AUKRB (PubMed:17485487). .

Expression : Epithelium,Lymph,Testis,Uterus,

Sort : 16281

No4 : 1

Host : Rabbit

Modifications : Unmodified
