

CD298 Polyclonal Antibody

Catalog No: YT5623

Reactivity: Human; Rat; Mouse;

Applications: WB;ELISA

Target: CD298

Fields: >>cGMP-PKG signaling pathway;>>cAMP signaling pathway;>>Cardiac muscle

contraction;>>Adrenergic signaling in cardiomyocytes;>>Insulin

secretion;>>Thyroid hormone synthesis;>>Thyroid hormone signaling

pathway;>>Aldosterone synthesis and secretion;>>Aldosterone-regulated sodium

reabsorption;>>Endocrine and other factor-regulated calcium

reabsorption;>>Proximal tubule bicarbonate reclamation;>>Salivary

secretion;>>Gastric acid secretion;>>Pancreatic secretion;>>Carbohydrate

digestion and absorption;>>Protein digestion and absorption;>>Bile

secretion;>>Mineral absorption

Gene Name: ATP1B3

Protein Name: Sodium/potassium-transporting ATPase subunit beta-3

P54709

P97370

Human Gene Id: 483

Human Swiss Prot

No:

Mouse Gene Id: 11933

Mouse Swiss Prot

No:

Rat Gene Id: 25390

Rat Swiss Prot No: Q63377

Immunogen: The antiserum was produced against synthesized peptide derived from the C-

terminal region of human ATP1B3. AA range:222-271

Specificity: CD298 Polyclonal Antibody detects endogenous levels of CD298 protein.

1/3

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. ELISA: 1:10000. Not yet tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 36kD

Cell Pathway: Cardiac muscle contraction; Aldosterone-regulated sodium reabsorption;

Background: The protein encoded by this gene belongs to the family of Na+/K+ and H+/K+

ATPases beta chain proteins, and to the subfamily of Na+/K+ -ATPases. Na+/K+ -ATPase is an integral membrane protein responsible for establishing and maintaining the electrochemical gradients of Na and K ions across the plasma membrane. These gradients are essential for osmoregulation, for sodium-coupled transport of a variety of organic and inorganic molecules, and for electrical excitability of nerve and muscle. This enzyme is composed of two subunits, a large catalytic subunit (alpha) and a smaller glycoprotein subunit (beta). The beta subunit regulates, through assembly of alpha/beta heterodimers, the number of sodium pumps transported to the plasma membrane. The glycoprotein subunit of Na+/K+ -ATPase is encoded by multiple genes. This gene encodes a beta 3

subunit. This gene encodes a beta 3 subun

Function: function: This is the non-catalytic component of the active enzyme, which

catalyzes the hydrolysis of ATP coupled with the exchange of Na(+) and K(+) ions across the plasma membrane. The exact function of the beta-3 subunit is not known.,similarity:Belongs to the X(+)/potassium ATPases subunit beta family.,subcellular location:Identified by mass spectrometry in melanosome fractions from stage I to stage IV.,subunit:Composed of three subunits: alpha

(catalytic), beta and gamma.,

Subcellular Location:

Apical cell membrane ; Single-pass type II membrane protein . Basolateral cell membrane ; Single-pass type II membrane protein . Melanosome . Identified by

mass spectrometry in melanosome fractions from stage I to stage IV.

Expression: Lung, Placenta, Uterus,

Sort : 3512
