

Centaurin-β1 rabbit pAb

Catalog No: YT7777

Reactivity: Human; Mouse

Applications: WB;ELISA

Target: Centaurin-β1

Fields: >>Endocytosis

Gene Name: ACAP1 CENTB1 KIAA0050

Protein Name : Centaurin-β1

Human Gene Id: 9744

Human Swiss Prot

No:

Q15027

216859

Mouse Gene Id:

Mouse Swiss Prot Q8K2H4

No:

Immunogen: Synthesized peptide derived from human Centaurin-β1 AA range: 490-570

Specificity: This antibody detects endogenous levels of Human Centaurin-β1

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:1000-2000 ELISA 1:5000-20000

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 81kD

Background:

domain:PH domain binds phospholipids including phosphatidic acid, phosphatidylinositol 3-phosphate, phosphatidylinositol 3,5-bisphosphate (PIP2) and phosphatidylinositol 3,4,5-trisphosphate (PIP3). May mediate ACAP1-binding to PIP2 or PIP3 containing membranes..enzyme regulation:GAP activity stimulated by phosphatidylinositol 4,5-bisphosphate (PIP2) and phosphatidic acid., function: GTP ase-activating protein (GAP) for ADP ribosylation factor 6 (ARF6) required for clathrin-dependent export of proteins from recycling endosomes to trans-Golgi network and cell surface., miscellaneous: Cells overexpressing ACAP1 show an accumulation of ITGB1 in recycling endosomes and inhibition of stimulation-dependent cell migration. Cells with reduced levels of ACAP1 or AKT1 and AKT2 show inhibition of stimulation-dependent cell migration. Cells overexpressing ACAP1 and PIP5K1C show formation of tubular structures derived from endosomal membranes., PTM: Phosphorylation at Ser-554 by PKB is required for interaction with ITGB1, export of ITGB1 from recycling endosomes to the cell surface and ITGB1-dependent cell migration., similarity: Contains 1 Arf-GAP domain., similarity: Contains 1 BAR domain., similarity: Contains 1 PH domain., similarity: Contains 3 ANK repeats., subunit: Interacts with GTP-bound ARF6. Interacts with third cytoplasmic loop of SLC2A4/GLUT4. Interacts with CLTC. Interacts with GULP1. Forms a complex with GDP-bound ARF6 and GULP1., tissue specificity: Highest level in lung and spleen. Low level in heart, kidney, liver and pancreas.,

Function:

domain:PH domain binds phospholipids including phosphatidic acid, phosphatidylinositol 3-phosphate, phosphatidylinositol 3,5-bisphosphate (PIP2) and phosphatidylinositol 3,4,5-trisphosphate (PIP3). May mediate ACAP1-binding to PIP2 or PIP3 containing membranes.,enzyme regulation:GAP activity stimulated by phosphatidylinositol 4,5-bisphosphate (PIP2) and phosphatidic acid.,function:GTPase-activating protein (GAP) for ADP ribosylation factor 6 (ARF6) required for clathrin-dependent export of proteins from recycling endosomes to trans-Golgi network and cell surface.,miscellaneous:Cells overexpressing ACAP1 show an accumulation of ITGB1 in recycling endosomes and inhibition of stimulation-dependent cell migration. Cells with reduced levels of ACAP1 or AKT1 and AKT2 show inhibition of stimulation-dependent cell migration. Cells overexpressing ACAP1 and PIP5K1C show formation of tubular struct

Subcellular Location:

Recycling endosome membrane ; Peripheral membrane protein ; Cytoplasmic side .

Expression : Highest level in lung and spleen. Low level in heart, kidney, liver and pancreas.
