

## FoxO4 (Acetyl Lys189) Polyclonal Antibody

Catalog No: YK0078

**Reactivity:** Human; Rat; Mouse;

**Applications:** WB;ELISA

Target: FoxO4

**Fields:** >>Ras signaling pathway;>>FoxO signaling pathway;>>Shigellosis

**Gene Name:** FOXO4 AFX AFX1 MLLT7

P98177

Q9WVH3

**Protein Name:** Forkhead box protein O4 (Fork head domain transcription factor AFX1)

Human Gene Id: 4303

**Human Swiss Prot** 

Idiliali Swiss Fio

No:

**Mouse Swiss Prot** 

No:

Immunogen: Synthetic Acetyl peptide from human protein at AA range: 189

**Specificity:** The antibody detects endogenous FoxO4 when Acetyl occurs at Lys189

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

**Dilution:** WB 1:500-2000, ELISA 1:10000-20000

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

**Concentration**: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

1/3

Observed Band: 55kD

**Background:** This gene encodes a member of the O class of winged helix/forkhead

transcription factor family. Proteins encoded by this class are regulated by factors

involved in growth and differentiation indicating they play a role in these

processes. A translocation involving this gene on chromosome X and the homolog of the Drosophila trithorax gene, encoding a DNA binding protein, located on chromosome 11 is associated with leukemia. Multiple transcript variants encoding

different isoforms have been found for this gene. [provided by RefSeq, Jan 2010],

**Function:** disease: A chromosomal aberration involving FOXO4 is found in acute

leukemias. Translocation t(X;11)(q13;q23) with MLL/HRX. The result is a rogue activator protein.,function:Transcription factor involved in the regulation of the insulin signaling pathway. Binds to insulin-response elements (IREs) and can activate transcription of IGFBP1. Down-regulates expression of HIF1A and suppresses hypoxia-induced transcriptional activation of HIF1A-modulated genes. Also involved in negative regulation of the cell cycle.,pharmaceutical:A constitutively active FOXO4 mutant where phosphorylation sites Thr-32, Ser-187 and Ser-262 have been mutated to alanine may have therapeutic potential in ERBB2/HER2-overexpressing cancers as it inhibits ERBB2-mediated cell

survival, transformation and tumorigenicity.,PTM:Acetylation by CBP, which is induced by peroxidase stress, inhibits transcriptional activity. Dea

Subcellular Location:

Cytoplasm. Nucleus. When phosphorylated, translocated from nucleus to cytoplasm. Dephosphorylation triggers nuclear translocation. Monoubiquitination increases nuclear localization. When deubiquitinated, translocated from nucleus

to cytoplasm.

**Expression:** Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas. Isoform

zeta is most abundant in the liver, kidney, and pancreas.

**Tag:** orthogonal,hot

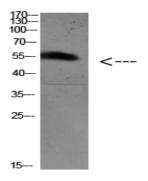

**Sort**: 6263

No4:

Host: Rabbit

Modifications: Acetyl

## **Products Images**

Western blot analysis of 3T3 mouse-kidney KB K562 Hela lysate, antibody was diluted at 500. Secondary antibody(catalog#:RS0002) was diluted at 1:20000
