

**SmcX Monoclonal Antibody**

<b>Catalog No :</b>	YM1096
<b>Reactivity :</b>	Human;Mouse;Rat;Bovine;Dog
<b>Applications :</b>	WB;IF
<b>Target :</b>	SmcX
<b>Gene Name :</b>	KDM5C
<b>Protein Name :</b>	Lysine-specific demethylase 5C
<b>Human Gene Id :</b>	8242
<b>Human Swiss Prot No :</b>	P41229
<b>Mouse Gene Id :</b>	20591
<b>Mouse Swiss Prot No :</b>	P41230
<b>Immunogen :</b>	Purified recombinant human SmcX (C-terminus) protein fragments expressed in E.coli.
<b>Specificity :</b>	SmcX Monoclonal Antibody detects endogenous levels of SmcX protein.
<b>Formulation :</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Source :</b>	Monoclonal, Mouse
<b>Dilution :</b>	WB 1:1000 - 1:2000. IF 1:100 - 1:500. Not yet tested in other applications.
<b>Purification :</b>	Affinity purification
<b>Concentration :</b>	1 mg/ml
<b>Storage Stability :</b>	-15°C to -25°C/1 year(Do not lower than -25°C)

**Molecularweight :** 176kD

---

**Background :** This gene is a member of the SMCY homolog family and encodes a protein with one ARID domain, one JmjC domain, one JmjN domain and two PHD-type zinc fingers. The DNA-binding motifs suggest this protein is involved in the regulation of transcription and chromatin remodeling. Mutations in this gene have been associated with X-linked mental retardation. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Apr 2009],

---

**Function :** cofactor:Alpha-ketoglutarate.,cofactor:Fe(2+).,disease:Defects in KDM5C are a cause of X-linked mental retardation (XLMR) [MIM:300534]. Mental retardation is usually defined as cognitive impairment with an IQ less than 70. Etiologically, mental retardation is a very heterogeneous condition that involves environmental, stochastic and/or genetic factors.,domain:Both the JmjC domain and the JmjN domain are required for enzymatic activity.,domain:The first PHD-type zinc finger domain recognizes and binds H3-K9Me3.,function:Histone demethylase that specifically demethylates 'Lys-4' of histone H3, thereby playing a central role in histone code. Does not demethylate histone H3 'Lys-9', H3 'Lys-27', H3 'Lys-36', H3 'Lys-79' or H4 'Lys-20'. Demethylates trimethylated and dimethylated but not monomethylated H3 'Lys-4'. Participates in transcriptional repression of neuronal genes by recruiting hist
