

CD305 (LAIR1)-FC recombinant protein

Catalog No: YD3007

Reactivity: Human;

Purity: >90% as determined by SDS-PAGE

Gene Name: LAIR1

Protein Name: Leukocyte-associated immunoglobulin-like receptor 1 (LAIR-1) (hLAIR1) (CD

antigen CD305)

Sequence: Amino acid:22-165,with FC tag.

Q6GTX8

Human Gene Id: 3903

Human Swiss Prot

No:

Formulation: Phosphate-buffered solution

Source: Mammalian cells

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Function : Functions as an inhibitory receptor that plays a constitutive negative regulatory

role on cytolytic function of natural killer (NK) cells, B-cells and T-cells. Activation by Tyr phosphorylation results in recruitment and activation of the phosphatases PTPN6 and PTPN11. It also reduces the increase of intracellular calcium evoked by B-cell receptor ligation. May also play its inhibitory role independently of SH2-containing phosphatases. Modulates cytokine production in CD4+ T-cells,

down-regulating IL2 and IFNG production while inducing secretion of

transforming growth factor beta. Down-regulates also IgG and IgE production in B-cells as well as IL8, IL10 and TNF secretion. Inhibits proliferation and induces apoptosis in myeloid leukemia cell lines as well as prevents nuclear translocation of NF-kappa-B p65 subunit/RELA and phosphorylation of I-kappa-B alpha/CHUK

in these cells. Inhibits

Subcellular Location:

Cell membrane; Single-pass type I membrane protein.

Expression: Expressed on the majority of peripheral mononuclear cells, including natural

killer (NK) cells, T-cells, B-cells, monocytes, and dendritic cells. Highly expressed in naive T-cells and B-cells but no expression on germinal center B-cells. Abnormally low expression in naive B-cells from HIV-1 infected patients. Very low expression in NK cells from a patient with chronic active Epstein-Barr virus infection.
