

IFNG-FC recombinant protein

Catalog No: YD3049

Reactivity: Human;

Purity: >90% as determined by SDS-PAGE

Gene Name: IFNG

Protein Name: Interferon gamma (IFN-gamma) (Immune interferon)

Sequence: Amino acid:24-166,with FC tag.

P01579

Human Gene Id: 3458

Human Swiss Prot

No:

Formulation: Phosphate-buffered solution

Source: Mammalian cells

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Function: Type II interferon produced by immune cells such as T-cells and NK cells that

plays crucial roles in antimicrobial, antiviral, and antitumor responses by

activating effector immune cells and enhancing antigen presentation

(PubMed:16914093, PubMed:8666937). Primarily signals through the JAK-STAT pathway after interaction with its receptor IFNGR1 to affect gene regulation (PubMed:8349687). Upon IFNG binding, IFNGR1 intracellular domain opens out to allow association of downstream signaling components JAK2, JAK1 and STAT1, leading to STAT1 activation, nuclear translocation and transcription of IFNG-regulated genes. Many of the induced genes are transcription factors such as IRF1 that are able to further drive regulation of a next wave of transcription (PubMed:16914093). Plays a role in class I antigen presentation pathway by

inducing a replacement of catalytic proteasome subunits with immun

Subcellular Location:

Secreted.

Expression : Released primarily from activated T lymphocytes.
