

## **CD48-FC recombinant protein**

Catalog No: YD3089

**Reactivity:** Human;

**Purity:** >90% as determined by SDS-PAGE

Gene Name: CD48

**Protein Name:** CD48 antigen (B-lymphocyte activation marker BLAST-1) (BCM1 surface

antigen) (Leukocyte antigen MEM-102) (SLAM family member 2) (SLAMF2)

(Signaling lymphocytic activation molecule 2) (TCT.1) (CD antig

**Sequence :** Amino acid:27-220,with FC tag.

P09326

Human Gene Id: 962

**Human Swiss Prot** 

No:

Formulation : Phosphate-buffered solution

**Source:** Mammalian cells

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

**Function:** Glycosylphosphatidylinositol (GPI)-anchored cell surface glycoprotein that

interacts via its N-terminal immunoglobulin domain with cell surface receptors including 2B4/CD244 or CD2 to regulate immune cell function and activation (PubMed:12007789, PubMed:27249817). Participates in T-cell signaling transduction by associating with CD2 and efficiently bringing the Src family protein kinase LCK and LAT to the TCR/CD3 complex (PubMed:19494291). In

turn, promotes LCK phosphorylation and subsequent activation

(PubMed:12007789). Induces the phosphorylation of the cytoplasmic

immunoreceptortyrosine switch motifs (ITSMs) of CD244 initiating a series of signaling events that leads to the generation of the immunological synapse and the directed release of cytolytic granules containing perforin and granzymes by T-

lymphocytes and NK-cells (PubMed:27249817, PubMed:9841922).

Subcellular Location:

Cell membrane; Lipid-anchor, GPI-anchor. Secreted.

1/2

**Expression :** Widely expressed on all hematopoietic cells.
