

**PPAR Delta mouse Monoclonal Antibody(2F9)**

<b>Catalog No :</b>	YM3601
<b>Reactivity :</b>	Human;Rat;Mouse
<b>Applications :</b>	IF;IHC
<b>Target :</b>	PPAR Delta
<b>Fields :</b>	>>PPAR signaling pathway;>>Wnt signaling pathway;>>Pathways in cancer;>>Acute myeloid leukemia
<b>Gene Name :</b>	PPARD NR1C2 PPARB
<b>Protein Name :</b>	PPAR Delta
<b>Human Gene Id :</b>	5467
<b>Human Swiss Prot No :</b>	Q03181
<b>Mouse Swiss Prot No :</b>	P35396
<b>Immunogen :</b>	Recombinant Protein of PPAR Delta of PPAR Delta
<b>Specificity :</b>	PPAR Delta protein detects endogenous levels of PPAR Delta
<b>Formulation :</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Source :</b>	Monoclonal, Mouse
<b>Dilution :</b>	IF 1:50-200 IHC 1:100-200
<b>Purification :</b>	The antibody was affinity-purified from mouse ascites by affinity-chromatography using specific immunogen.
<b>Concentration :</b>	1 mg/ml
<b>Storage Stability :</b>	-15°C to -25°C/1 year(Do not lower than -25°C)

**Observed Band :** 50kD

---

**Cell Pathway :** PPAR;WNT;WNT-T CELLPathways in cancer;Acute myeloid leukemia;

---

**Background :** peroxisome proliferator activated receptor delta(PPARD) Homo sapiens This gene encodes a member of the peroxisome proliferator-activated receptor (PPAR) family. PPARs are nuclear hormone receptors that bind peroxisome proliferators and control the size and number of peroxisomes produced by cells. PPARs mediate a variety of biological processes, and may be involved in the development of several chronic diseases, including diabetes, obesity, atherosclerosis, and cancer. This protein is a potent inhibitor of ligand-induced transcription activity of PPAR alpha and PPAR gamma. It may function as an integrator of transcription repression and nuclear receptor signaling. The expression of this gene is found to be elevated in colorectal cancer cells. The elevated expression can be repressed by adenomatous polyposis coli (APC), a tumor suppressor protein related to APC/beta-catenin signaling pathway. Knockout studies in mice suggested the role of this

---

**Function :** function:Receptor that binds peroxisome proliferators such as hypolipidemic drugs and fatty acids. Once activated by a ligand, the receptor binds to a promoter element in the gene for acyl-CoA oxidase and activates its transcription. It therefore controls the peroxisomal beta-oxidation pathway of fatty acids. Decreases expression of NPC1L1 once activated by a ligand.,online information:Peroxisome proliferator-activated receptor entry,similarity:Belongs to the nuclear hormone receptor family. NR1 subfamily.,similarity:Contains 1 nuclear receptor DNA-binding domain.,subunit:Heterodimer with the retinoid X receptor.,tissue specificity:Ubiquitous with maximal levels in placenta and skeletal muscle.,

---

**Subcellular Location :** Nucleus.

---

**Expression :** Ubiquitous with maximal levels in placenta and skeletal muscle.
