

## Gastrin Polyclonal Antibody

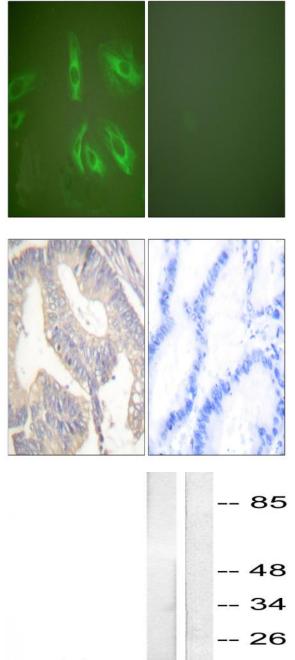

Catalog No :	YT1857
Reactivity :	Human;Mouse;Rat
Applications :	WB;IHC;IF;ELISA
Target :	Gastrin
Fields :	>>Gastric acid secretion
Gene Name :	GAST
Protein Name :	Gastrin
Human Gene Id :	2520
Human Swiss Prot	P01350
No : Mouse Gene Id :	14459
Mouse Swiss Prot	P48757
No : Rat Gene Id :	25320
Rat Swiss Prot No :	P04563
Immunogen :	The antiserum was produced against synthesized peptide derived from human Gastrin. AA range:52-101
Specificity :	Gastrin Polyclonal Antibody detects endogenous levels of Gastrin protein.
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG
Dilution :	WB 1:500 - 1:2000. IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:10000. Not yet tested in other applications.

<b>Purification :</b>	The antibody was affinity-purified from rabbit antiserum by affinity-
	chromatography using epitope-specific immunogen.
<b>Concentration :</b>	1 mg/ml
Storage Stability :	-15°C to -25°C/1 year(Do not lower than -25°C)
<b>Observed Band :</b>	12kD
Background :	Gastrin is a hormone whose main function is to stimulate secretion of
	hydrochloric acid by the gastric mucosa, which results in gastrin formation
	inhibition. This hormone also acts as a mitogenic factor for gastrointestinal epithelial cells. Gastrin has two biologically active peptide forms, G34 and G17.
	[provided by RefSeq, Jul 2008],
	<u>Flanderscharten</u>
Function :	function:Gastrin stimulates the stomach mucosa to produce and secrete
	hydrochloric acid and the pancreas to secrete its digestive enzymes. It also
	stimulates smooth muscle contraction and increases blood circulation and water
	secretion in the stomach and intestine.,online information:Gastrin
	entry, PTM: Sulfation enhances proteolytic processing, and blocks peptide
	degradation. Levels of sulfation differ between proteolytically-cleaved gastrins. Thus, gastrin-6 is almost 73% sulfated, whereas the larger gastrins are less than
	50% sulfated. Sulfation levels are also tissue-specific.,PTM:Two different
	processing pathways probably exist in antral G-cells. In the dominant pathway
	progastrin is cleaved at three sites resulting in two major bioactive gastrins,
	gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be
	processed only at the most C-terminal dibasic site resul
Subcellular	Secreted.
Location :	
Expression :	Gastric mucosa,
