

Trk A Polyclonal Antibody

Catalog No: YT4740

Reactivity: Human; Rat; Mouse;

Applications: IHC;IF;ELISA

Target: Trk A

Fields: >>MAPK signaling pathway;>>Ras signaling pathway;>>Calcium signaling

pathway;>>PI3K-Akt signaling pathway;>>Apoptosis;>>Neurotrophin signaling pathway;>>Inflammatory mediator regulation of TRP channels;>>Pathways in cancer;>>Transcriptional misregulation in cancer;>>Thyroid cancer;>>Central

carbon metabolism in cancer

Gene Name: NTRK1

Protein Name: High affinity nerve growth factor receptor

Human Gene Id: 4914

Human Swiss Prot P04629

No:

Mouse Swiss Prot Q3UFB7

No:

Immunogen: The antiserum was produced against synthesized peptide derived from human

Trk A. AA range:747-796

Specificity: Trk A Polyclonal Antibody detects endogenous levels of Trk A protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:5000. Not yet tested in other

applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 140-180kD

Cell Pathway: MAPK_ERK_Growth;MAPK_G_Protein;Endocytosis;Apoptosis_Inhibition;Apopt

osis_Mitochondrial;Apoptosis_Overview;Neurotrophin;Pathways in

cancer; Thyroid cancer;

Background: This gene encodes a member of the neurotrophic tyrosine kinase receptor

(NTKR) family. This kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. The presence of this kinase leads to cell differentiation and may play a role in specifying sensory neuron subtypes. Mutations in this gene have been associated with congenital insensitivity to pain, anhidrosis, self-mutilating behavior, mental retardation and cancer. Alternate transcriptional splice variants of this gene have been found, but only three have been characterized to date. [provided by RefSeq,

Jul 2008],

Function: alternative products:Both isoforms have similar biological properties,catalytic

activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine phosphate.,caution:The sequence shown here is derived from an Ensembl

automatic analysis pipeline and should be considered as preliminary

data.,disease:Chromosomal aberrations involving NTRK1 are a cause of thyroid papillary carcinoma (PACT) [MIM:188550]. Intrachromosomal rearrangement that links the protein kinase domain of NTRK1 to the 5'-end of the TPR gene forms the fusion protein TRK-T1. TRK-T1 is a 55 kDa protein reacting with antibodies against the C-terminus of the NTRK1 protein.,disease:Chromosomal aberrations

involving NTRK1 are a cause of thyroid papillary carcinoma (PACT)

[MIM:188550]. Translocation t(1;3)(q21;q11) with TFG generates the TRKT3 (TRK-T3) transcript by fusing TFG to the 3'-end of NTRK1; a rearrangement with

TPM3 gen

Subcellular Location : Cell membrane ; Single-pass type I membrane protein . Early endosome membrane ; Single-pass type I membrane protein . Late endosome membrane ; Single-pass type I membrane protein . Recycling endosome membrane ; Single-

pass type I membrane protein. Rapidly internalized after NGF binding (PubMed:1281417). Internalized to endosomes upon binding of NGF or NTF3 and further transported to the cell body via a retrograde axonal transport. Localized at cell membrane and early endosomes before nerve growth factor

 (\mbox{NGF}) stimulation. Recruited to late endosomes after NGF stimulation.

Colocalized with RAPGEF2 at late endosomes. .

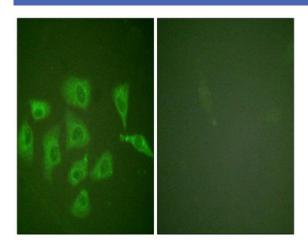

Expression: Is

Isoform TrkA-I is found in most non-neuronal tissues. Isoform TrkA-II is primarily expressed in neuronal cells. TrkA-III is specifically expressed by pluripotent

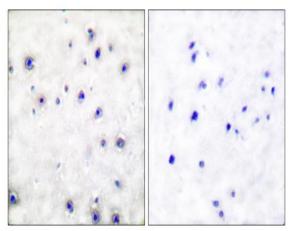

neural stem and neural crest progenitors.
