

HSP72 Polyclonal Antibody

Catalog No: YN0205

Reactivity: Human; Mouse; Rat

Applications: WB;ELISA

Target: HSP72

Fields: >>Spliceosome;>>MAPK signaling pathway;>>Protein processing in

endoplasmic reticulum;>>Endocytosis;>>Longevity regulating pathway - multiple

species;>>Antigen processing and presentation;>>Estrogen signaling

pathway;>>Prion disease;>>Legionellosis;>>Toxoplasmosis;>>Measles;>>Lipid

and atherosclerosis

P54652

P17156

Gene Name: HSPA2

Protein Name: Heat shock-related 70 kDa protein 2 (Heat shock 70 kDa protein 2)

Human Gene Id: 3306

Human Swiss Prot

No:

Mouse Swiss Prot

No:

Rat Swiss Prot No: P14659

Immunogen: Synthesized peptide derived from human protein . at AA range: 470-550

Specificity: HSP72 Polyclonal Antibody detects endogenous levels of protein.

Formulation: Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution : WB 1:500-2000 ELISA 1:5000-20000

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 70kD

Cell Pathway: Spliceosome;MAPK_ERK_Growth;MAPK_G_Protein;Endocytosis;Antigen

processing and presentation;

Background: function: In cooperation with other chaperones, Hsp70s stabilize preexistent

proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.,similarity:Belongs to the heat

shock protein 70 family., subunit: Interacts with ZNF541.,

Function: function: In cooperation with other chaperones, Hsp70s stabilize preexistent

proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.,similarity:Belongs to the heat

shock protein 70 family., subunit: Interacts with ZNF541.,

Subcellular Location:

Cytoplasm, cytoskeleton, spindle. Colocalizes with SHCBP1L at spindle during

the meiosis process...

Expression : Brain, Eye, Lung,
