

## V-ATPase D1 Polyclonal Antibody

<b>Catalog No :</b>	YT5026
<b>Reactivity :</b>	Human;Mouse;Rat
<b>Applications :</b>	WB;ELISA
<b>Target :</b>	V-ATPase D1
<b>Fields :</b>	>>Oxidative phosphorylation;>>Metabolic pathways;>>Lysosome;>>Phagosome;>>Synaptic vesicle cycle;>>Collecting duct acid secretion;>>Vibrio cholerae infection;>>Epithelial cell signaling in Helicobacter pylori infection;>>Tuberculosis;>>Human papillomavirus infection;>>Viral carcinogenesis;>>Rheumatoid arthritis
<b>Gene Name :</b>	ATP6V0D1
<b>Protein Name :</b>	V-type proton ATPase subunit d 1
<b>Human Gene Id :</b>	9114
<b>Human Swiss Prot No :</b>	P61421
<b>Mouse Gene Id :</b>	11972
<b>Mouse Swiss Prot No :</b>	P51863
<b>Immunogen :</b>	The antiserum was produced against synthesized peptide derived from human V-ATPase D1. AA range:221-270
<b>Specificity :</b>	V-ATPase D1 Polyclonal Antibody detects endogenous levels of V-ATPase D1 protein.
<b>Formulation :</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Source :</b>	Polyclonal, Rabbit,IgG
<b>Dilution :</b>	WB 1:500 - 1:2000. ELISA: 1:20000. Not yet tested in other applications.

<b>Purification :</b>	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
<b>Concentration :</b>	1 mg/ml
<b>Storage Stability :</b>	-15°C to -25°C/1 year(Do not lower than -25°C)
<b>Observed Band :</b>	40kD
<b>Cell Pathway :</b>	Oxidative phosphorylation;Lysosome;Vibrio cholerae infection;Epithelial cell signaling in Helicobacter pylori infection;
<b>Background :</b>	This gene encodes a component of vacuolar ATPase (V-ATPase), a multisubunit enzyme that mediates acidification of eukaryotic intracellular organelles. V-ATPase dependent organelle acidification is necessary for such intracellular processes as protein sorting, zymogen activation, receptor-mediated endocytosis, and synaptic vesicle proton gradient generation. V-ATPase is composed of a cytosolic V1 domain and a transmembrane V0 domain. The V1 domain consists of three A and three B subunits, two G subunits plus the C, D, E, F, and H subunits. The V1 domain contains the ATP catalytic site. The V0 domain consists of five different subunits: a, c, c', c'', and d. Additional isoforms of many of the V1 and V0 subunit proteins are encoded by multiple genes or alternatively spliced transcript variants. This encoded protein is known as the D subunit and is found ubiquitously. [pro
<b>Function :</b>	function:Subunit of the integral membrane V0 complex of vacuolar ATPase. Vacuolar ATPase is responsible for acidifying a variety of intracellular compartments in eukaryotic cells, thus providing most of the energy required for transport processes in the vacuolar system. May play a role in coupling of proton transport and ATP hydrolysis.,similarity:Belongs to the V-ATPase V0D/AC39 subunit family.,subunit:V-ATPase is an heteromultimeric enzyme composed of a peripheral catalytic V1 complex (components A to H) attached to an integral membrane V0 proton pore complex (components: a, c, c', c'' and d),,tissue specificity:Ubiquitous.,
<b>Subcellular Location :</b>	Membrane ; Peripheral membrane protein ; Cytoplasmic side . Lysosome membrane ; Peripheral membrane protein . Cytoplasmic vesicle, clathrin-coated vesicle membrane ; Peripheral membrane protein . Localizes to centrosome and the base of the cilium. .
<b>Expression :</b>	Ubiquitous.

---
