

c-FLIP Polyclonal Antibody

Catalog No: YT5156

Reactivity: Human; Mouse

Applications: WB;ELISA

Target: c-FLIP

Fields: >>NF-kappa B signaling pathway;>>Autophagy -

animal;>>Apoptosis;>>Necroptosis;>>TNF signaling pathway;>>Chagas

disease;>>Hepatitis C

Gene Name: CFLAR

Protein Name: CASP8 and FADD-like apoptosis regulator

O35732

Human Gene Id: 8837

Human Swiss Prot 015519

No:

Mouse Swiss Prot

No:

Immunogen: The antiserum was produced against synthesized peptide derived from the N-

terminal region of human CFLAR. AA range:1-50

Specificity: c-FLIP Polyclonal Antibody detects endogenous levels of c-FLIP protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. ELISA: 1:20000. Not yet tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 55kD

Cell Pathway: Apoptosis_Inhibition;Apoptosis_Mitochondrial;Apoptosis_Overview;

Background: The protein encoded by this gene is a regulator of apoptosis and is structurally

similar to caspase-8. However, the encoded protein lacks caspase activity and appears to be itself cleaved into two peptides by caspase-8. Several transcript variants encoding different isoforms have been found for this gene, and partial

evidence for several more variants exists. [provided by RefSeq, Feb 2011],

Function: domain: The caspase domain lacks the active sites residues involved in

catalysis.,function:Apoptosis regulator protein which may function as a crucial link between cell survival and cell death pathways in mammalian cells. Acts as an inhibitor of TNFRSF6 mediated apoptosis. A proteolytic fragment (p43) is likely retained in the death-inducing signaling complex (DISC) thereby blocking further recruitment and processing of caspase-8 at the complex. Full length and shorter isoforms have been shown either to induce apoptosis or to reduce TNFRSF-triggered apoptosis. Lacks onzymatic (caspase) activity, induction: Represend by

triggered apoptosis. Lacks enzymatic (caspase) activity.,induction:Repressed by IL-2 after TCR stimulation, during progression to the S-phase of the cell

cycle.,PTM:Proteolytically processed; probably by caspase-8. Processing likely occurs at the DISC and generates subunit p43 and p12.,similarity:Belongs to the

peptidase C14A family.,similarity:Contains

Subcellular Location :

cytoplasm,cytosol,death-inducing signaling complex,CD95 death-inducing

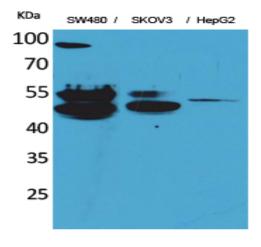

signaling complex, membrane raft, ripoptosome,

Expression : Widely expressed. Higher expression in skeletal muscle, pancreas, heart,

kidney, placenta, and peripheral blood leukocytes. Also detected in diverse cell

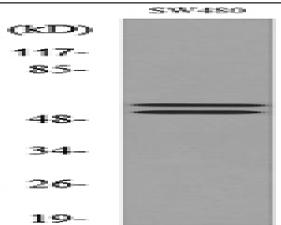

lines. Isoform 8 is predominantly expressed in testis and skeletal muscle.
