

SOCS-3 Polyclonal Antibody

Catalog No: YT5916

Reactivity: Human; Mouse; Rat

Applications: WB;IHC;IF

Target: SOCS-3

Fields: >>Ubiquitin mediated proteolysis;>>Osteoclast differentiation;>>JAK-STAT

signaling pathway;>>TNF signaling pathway;>>Insulin signaling pathway;>>Prolactin signaling pathway;>>Adipocytokine signaling

pathway;>>Type II diabetes mellitus;>>Insulin resistance;>>Non-alcoholic fatty liver disease;>>Growth hormone synthesis, secretion and action;>>Hepatitis

C;>>Influenza A;>>Herpes simplex virus 1 infection

Gene Name: SOCS3 CIS3 SSI3

Protein Name : Suppressor of cytokine signaling 3 (SOCS-3) (Cytokine-inducible SH2 protein 3)

(CIS-3) (STAT-induced STAT inhibitor 3) (SSI-3)

Human Gene Id: 9021

Human Swiss Prot

No:

Mouse Gene Id: 12702

Mouse Swiss Prot

No:

Rat Swiss Prot No: 088583

Immunogen: Synthetic peptide from human protein at AA range: 20-70

Specificity: The antibody detects endogenous SOCS-3

O14543

O35718

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

1/3

Dilution: WB 1:500 - 1:2000.IHC:1:50-300.. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 25kD

Cell Pathway: Ubiquitin mediated proteolysis; Jak_STAT; Insulin_Receptor; Adipocytokine; Type

Il diabetes mellitus;

Background: This gene encodes a member of the STAT-induced STAT inhibitor (SSI), also

known as suppressor of cytokine signaling (SOCS), family. SSI family members are cytokine-inducible negative regulators of cytokine signaling. The expression of this gene is induced by various cytokines, including IL6, IL10, and interferon (IFN)-gamma. The protein encoded by this gene can bind to JAK2 kinase, and inhibit the activity of JAK2 kinase. Studies of the mouse counterpart of this gene

suggested the roles of this gene in the negative regulation of fetal liver

hematopoiesis, and placental development. [provided by RefSeq, Jul 2008],

Function: disease:Genetic variation in the promoter region of SOCS3 may be associated

with susceptibility to atopic dermatitis 4 (ATOD4) [MIM:605805]. Atopic dermatitis [MIM:603165], also known as eczema commonly begins in infancy or early

childhook and is characterized by ichy and inflamed skin.,domain:The ESS and SH2 domains are required for JAK phosphotyrosine binding. Further interaction with the KIR domain is necessary for signal and kinase inhibition.,domain:The SOCS box domain mediates the interaction with the Elongin BC complex, an adapter module in different E3 ubiquitin ligase complexes.,function:SOCS family proteins form part of a classical negative feedback system that regulates cytokine signal transduction. SOCS3 is involved in negative regulation of cytokines that signal through the JAK/STAT pathway. Inhibits cytokine signal transduction by

binding to tyrosine kinase receptors includ

Subcellular Location : intracellular, cytoplasm, cytosol,

Expression: Widely expressed with high expression in heart, placenta, skeletal muscle,

peripheral blood leukocytes, fetal and adult lung, and fetal liver and kidney. Lower

levels in thymus.
