

FAS-L Polyclonal Antibody

Catalog No: YT6037

Reactivity: Human; Rat; Mouse;

Applications: IHC;IF;ELISA

Target: FAS-L

Fields: >>Platinum drug resistance;>>MAPK signaling pathway;>>Ras signaling

pathway;>>Cytokine-cytokine receptor interaction;>>FoxO signaling

pathway;>>PI3K-Akt signaling pathway;>>Apoptosis;>>Necroptosis;>>Natural killer cell mediated cytotoxicity;>>Neurotrophin signaling pathway;>>Non-alcoholic fatty liver disease;>>Alcoholic liver disease;>>Type I diabetes mellitus;>>Pathways of neurodegeneration - multiple diseases;>>Pathogenic

Escherichia coli infection;>>Chagas disease;>>African

trypanosomiasis;>>Hepatitis C;>>Hepatitis B;>>Measles;>>Human cytomegalovirus infection;>>Influenza A;>>Human papillomavirus

infection;>>Herpes simplex virus 1 infection;>>Human immunodeficiency virus 1 infection;>>Pathways in cancer;>>Proteoglycans in cancer;>>Autoimmune thyroid disease;>>Allograft rejection;>>Graft-versus-host disease;>>Lipid and

atherosclerosis

Gene Name: FASLG APT1LG1 CD95L FASL TNFSF6

Protein Name: Tumor necrosis factor ligand superfamily member 6 (Apoptosis antigen ligand)

(APTL) (CD95 ligand) (CD95-L) (Fas antigen ligand) (Fas ligand) (FasL) (CD

antigen CD178) [Cleaved into: Tumor necrosis fac

Human Gene Id: 356

Human Swiss Prot P48023

No:

Mouse Gene Id: 14103

Mouse Swiss Prot P41047

No:

Immunogen: Synthetic peptide from human protein at AA range: 121-170

Specificity: The antibody detects endogenous FAS-L

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Formulation:

Source: Polyclonal, Rabbit, IgG

Dilution: IHC 1:50-200, ELISA 1:10000-20000. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

MAPK_ERK_Growth;MAPK_G_Protein;Cytokine-cytokine receptor interaction;A **Cell Pathway:**

poptosis Inhibition; Apoptosis Mitochondrial; Apoptosis Overview; Natural killer

cell mediated cytotoxicity; Neurotrophin; Type I diab

Background: This gene is a member of the tumor necrosis factor superfamily. The primary

> function of the encoded transmembrane protein is the induction of apoptosis triggered by binding to FAS. The FAS/FASLG signaling pathway is essential for immune system regulation, including activation-induced cell death (AICD) of T cells and cytotoxic T lymphocyte induced cell death. It has also been implicated in the progression of several cancers. Defects in this gene may be related to some

cases of systemic lupus erythematosus (SLE). Alternatively spliced transcript

variants have been described. [provided by RefSeg, Nov 2014],

Function: disease:Defects in FASLG are the cause of autoimmune lymphoproliferative

syndrome type 1B (ALPS1B) [MIM:601859]; also known as Canale-Smith

syndrome (CSS). ALPS is a childhood syndrome involving hemolytic anemia and

thrombocytopenia with massive lymphadenopathy and

splenomegaly..function:Cytokine that binds to TNFRSF6/FAS, a receptor that transduces the apoptotic signal into cells. May be involved in cytotoxic T-cell mediated apoptosis and in T-cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-

stimulated suicide of mature T-cells, or both. Binding to the decoy receptor TNFRSF6B/DcR3 modulates its effects.,online information:FAS-ligand entry, online information: FASLG mutation db, PTM: N-glycosylated., PTM: The

soluble form derives from the membrane form by proteolytic

processing., similarity: Belongs to the tumor necrosis fa

Subcellular Location:

Cell membrane; Single-pass type II membrane protein. Cytoplasmic vesicle lumen . Lysosome lumen . Is internalized into multivesicular bodies of secretory

lysosomes after phosphorylation by FGR and monoubiquitination (PubMed:17164290). Colocalizes with the SPPL2A protease at the cell

membrane (PubMed:17557115)..; [Tumor necrosis factor ligand superfamily member 6, soluble form]: Secreted . May be released into the extracellular fluid by cleavage from the cell surface. .; [FasL intracellular domain]: Nucleus . The FasL

2/3

ICD cytoplasmic form is translocated into the nucleus. .

Expression : Blood, Leukocyte, Spleen,
