

## Fibronectin Polyclonal Antibody

| Catalog No :            | YT5848   |
|-------------------------|--|
| Reactivity :            | Human;Rat;Mouse;   |
| Applications :          | WB;IHC;IF;ELISA  |
| Target :                | Fibronectin  |
| Fields :                | >>PI3K-Akt signaling pathway;>>Focal adhesion;>>ECM-receptor<br>interaction;>>Regulation of actin cytoskeleton;>>AGE-RAGE signaling pathway<br>in diabetic complications;>>Bacterial invasion of epithelial cells;>>Yersinia<br>infection;>>Amoebiasis;>>Human papillomavirus infection;>>Pathways in<br>cancer;>>Proteoglycans in cancer;>>Small cell lung cancer |
| Gene Name :             | FN1 FN   |
| Protein Name :          | Fibronectin  |
| Human Gene Id :         | 2335   |
| Human Swiss Prot        | P02751   |
| No :<br>Mouse Gene Id : | 14268  |
| Mouse Swiss Prot        | P11276   |
| No :<br>Immunogen :     | Synthetic peptide from human protein at AA range: 2304-2375  |
| Specificity :           | The antibody detects endogenous Fibronectin  |
| Formulation :           | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.  |
| Source :                | Polyclonal, Rabbit,IgG   |
| Dilution :              | IHC 1:50-200, ELISA 1:10000-20000,WB 1:500-2000. IF 1:50-200   |
| Purification :          | The antibody was affinity-purified from rabbit antiserum by affinity-<br>chromatography using epitope-specific immunogen.  |

| Concentration :                           | 1 mg/ml  |
|---|--|
|   | 1 mg/m   |
| Storage Stability :                       | -15°C to -25°C/1 year(Do not lower than -25°C)   |
| Molecularweight :                         | 272kD  |
| Cell Pathway :                            | Focal adhesion;ECM-receptor interaction;Regulates Actin and Cytoskeleton;Pathways in cancer;Small cell lung cancer;  |
| Background :                              | This gene encodes fibronectin, a glycoprotein present in a soluble dimeric form<br>in plasma, and in a dimeric or multimeric form at the cell surface and in<br>extracellular matrix. The encoded preproprotein is proteolytically processed to<br>generate the mature protein. Fibronectin is involved in cell adhesion and migration<br>processes including embryogenesis, wound healing, blood coagulation, host<br>defense, and metastasis. The gene has three regions subject to alternative<br>splicing, with the potential to produce 20 different transcript variants, at least one<br>of which encodes an isoform that undergoes proteolytic processing. The full-<br>length nature of some variants has not been determined. [provided by RefSeq,<br>Jan 2016],  |
| Function :                                | alternative products:Additional isoforms seem to exist,developmental stage:Ugl-Y1, Ugl-Y2 and Ugl-Y3 are present in the urine from 0 to 17 years of age.,disease:Defects in FN1 are the cause of glomerulopathy with fibronectin deposits type 2 (GFND2) [MIM:601894]; also known as familial glomerular nephritis with fibronectin deposits or fibronectin glomerulopathy. GFND is a genetically heterogeneous autosomal dominant disorder characterized clinically by proteinuria, microscopic hematuria, and hypertension that leads to end-stage renal failure in the second to fifth decade of life.,function:Fibronectins bind cell surfaces and various compounds including collagen, fibrin, heparin, DNA, and actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape. Interaction with TNR mediates inhibition of cell adhesion and neurite outgrowth |
| Subcellular<br>Location :<br>Expression : | Secreted, extracellular space, extracellular matrix .<br>Expressed in the inner limiting membrane and around blood vessels in the retina (at protein level) (PubMed:29777959). Plasma FN (soluble dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix. UgI-Y1, UgI-Y2 and UgI-Y3 are found in urine (PubMed:17614963).   |
