

## syntenin rabbit pAb

Catalog No: YT7937

**Reactivity:** Human;Rat;Dog;Pig

**Applications:** WB;ELISA

Target: syntenin

Gene Name: SDCBP MDA9 SYCL

O00560

O08992

Protein Name: syntenin

Human Gene Id: 6386

**Human Swiss Prot** 

No:

Mouse Gene Id: 53378

**Mouse Swiss Prot** 

No:

Rat Gene Id: 83841

Rat Swiss Prot No: Q9JI92

**Immunogen:** Synthesized peptide derived from human syntenin

**Specificity:** This antibody detects endogenous levels of Human,Rat,Dog,Pig syntenin

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

**Dilution:** WB 1:1000-2000 ELISA 1:5000-20000

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

1/3

**Concentration:** 1 mg/ml

-15°C to -25°C/1 year(Do not lower than -25°C) Storage Stability:

Molecularweight: 33kD

**Background:** syndecan binding protein(SDCBP) Homo sapiens The protein encoded by this

> gene was initially identified as a molecule linking syndecan-mediated signaling to the cytoskeleton. The syntenin protein contains tandemly repeated PDZ domains that bind the cytoplasmic. C-terminal domains of a variety of transmembrane proteins. This protein may also affect cytoskeletal-membrane organization, cell adhesion, protein trafficking, and the activation of transcription factors. The protein is primarily localized to membrane-associated adherens junctions and focal adhesions but is also found at the endoplasmic reticulum and nucleus. Alternative splicing results in multiple transcript variants encoding different

isoforms. [provided by RefSeq, Jul 2008],

**Function:** function: Seems to function as an adapter protein. In adherens junctions may

> function to couple syndecans to cytoskeletal proteins or signaling components. Seems to couple transcription factor SOX4 to the IL-5 receptor (IL5RA). May also play a role in vesicular trafficking. Seems to be required for the targeting of TGFA to the cell surface in the early secretory pathway, induction: By gamma interferon in melanoma cells., PTM: Phosphorylated on tyrosine residues., similarity: Contains 2 PDZ (DHR) domains., subcellular location: Mainly membrane-associated. Localized to adherens junctions, focal adhesions and endoplasmic reticulum. Colocalized with actin stress fibers. Also found in the nucleus. Identified by mass spectrometry in melanosome fractions from stage I to stage IV., subunit: Monomer and homodimer (By similarity). Interacts with SDC1, SDC2, SDC3, SDC4,

NRXN2, EPHA7, EPHB1, NF2 isoform 1, TG

Subcellular Location:

Cell junction, focal adhesion. Cell junction, adherens junction. Cell membrane; Peripheral membrane protein. Endoplasmic reticulum membrane; Peripheral membrane protein. Nucleus. Melanosome. Cytoplasm, cytosol. Cytoplasm, cytoskeleton. Secreted, extracellular exosome. Membrane raft. Mainly membrane-associated. Localized to adherens junctions, focal adhesions and endoplasmic reticulum. Colocalized with actin stress fibers. Also found in the nucleus. Identified by mass spectrometry in melanosome fractions from stage I to stage IV. Associated to the plasma membrane in the presence of FZD7 and phosphatidylinositol 4,5-bisphosphate (PIP2) (PubMed:27386966). .

**Expression:** 

Expressed in lung cancers, including adenocarcinoma, squamous cell carcinoma and small-cell carcinoma (at protein level) (PubMed:25893292). Widely expressed. Expressed in fetal kidney, liver, lung and brain. In adult highest expression in heart and placenta.
