

Collagen IV α2 (Cleaved-Ser1485) rabbit pAb

Catalog No :	YC0143
Reactivity :	Human;Mouse
Applications :	WB;ELISA
Target :	Collagen IV a2
Fields :	>>PI3K-Akt signaling pathway;>>Focal adhesion;>>ECM-receptor interaction;>>Relaxin signaling pathway;>>AGE-RAGE signaling pathway in diabetic complications;>>Protein digestion and absorption;>>Amoebiasis;>>Human papillomavirus infection;>>Pathways in cancer;>>Small cell lung cancer
Gene Name :	COL4A2
Protein Name :	Collagen IV α2 (Cleaved-Ser1485)
Human Gene Id :	1284
Human Swiss Prot	P08572
No : Mouse Gene Id :	12827
Mouse Swiss Prot	P08122
NO : Immunogen :	Synthesized peptide derived from human Collagen IV a2 (Cleaved-Ser1485)
Specificity :	This antibody detects endogenous levels of Human,Mouse Collagen IV α2 (Cleaved-Ser1485, protein was cleaved amino acid sequence between 1485-1486)
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG
Dilution :	WB 1:1000-2000 ELISA 1:5000-20000

specific immunogen.
/ml

190kD
ain:Alpha chains of type IV collagen have a non-collagenous domain (NC1) r C-terminus, frequent interruptions of the G-X-Y repeats in the long central helical domain (which may cause flexibility in the triple helix), and a short N- ral triple-helical 7S domain.,function:Type IV collagen is the major structural onent of glomerular basement membranes (GBM), forming a 'chicken-wire' work together with laminins, proteoglycans and entactin/nidogen. Potently s angiogenesis and tumor growth.,PTM:Prolines at the third position of the tide repeating unit (G-X-Y) are hydroxylated in some or all of the s.,PTM:The trimeric structure of the NC1 domains may be stabilized by ent bonds between Lys and Met residues.,PTM:Type IV collagens contain rous cysteine residues which are involved in inter- and intramolecular de bonding. 12 of these, located in the NC1 domain, are conserved in all n type IV collagens.,similarity:Belongs to the type IV collagen .,similarity:Contains 1 collagen IV NC1 (C-terminal non-collagenous) n.,subunit:There are six type IV collagen isoforms, alpha 1(IV)-alpha 6(IV), of which can form a triple helix structure with 2 other chains to generate type agen network.,
tive regulation of angiogenesis, extracellular matrix zation, extracellular structure organization, regulation of angiogenesis,
eted, extracellular space, extracellular matrix, basement membrane.
