

Cleaved-Caspase-6 p11 (A194) Polyclonal Antibody

YC0106 Catalog No:

Human; Mouse; Rat Reactivity:

Applications: WB;ELISA

Caspase-6 **Target:**

Fields: >>Apoptosis;>>Lipid and atherosclerosis

Gene Name: CASP6 MCH2

Protein Name: CleavedCaspase6p11

Human Gene Id: 839

Human Swiss Prot

No:

Mouse Swiss Prot

No:

Rat Swiss Prot No:

O35397

Synthesized peptide derived from Cleaved-Caspase-6 p11 (A194) . at AA range: Immunogen:

150-230

P55212

O08738

Specificity: Cleaved-Caspase-6 p11 (A194) Polyclonal Antibody detects endogenous levels

of Cleaved-Caspase-6 p11

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Polyclonal, Rabbit, IgG Source:

WB 1:500-2000, ELISA 1:10000-20000 **Dilution:**

The antibody was affinity-purified from rabbit antiserum by affinity-**Purification:**

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/2

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 33kD

Cell Pathway: Apoptosis_Inhibition;Apoptosis_Mitochondrial;Apoptosis_Overview;

Background : This gene encodes a member of the cysteine-aspartic acid protease (caspase)

family of enzymes. Sequential activation of caspases plays a central role in the execution-phase of cell apoptosis. Caspases exist as inactive proenzymes which undergo proteolytic processing at conserved aspartic acid residues to produce two subunits, large and small, that dimerize to form the active enzyme. This protein is processed by caspases 7, 8 and 10, and is thought to function as a downstream enzyme in the caspase activation cascade. Alternative splicing of this gene results in multiple transcript variants that encode different isoforms.

[provided by RefSeq, Oct 2015],

Function: catalytic activity:Strict requirement for Asp at position P1 and has a preferred

cleavage sequence of Val-Glu-His-Asp-|-.,enzyme regulation:Activation is suppressed by phosphorylation at Ser-257.,function:Involved in the activation cascade of caspases responsible for apoptosis execution. Cleaves poly(ADP-ribose) polymerase in vitro, as well as lamins. Overexpression promotes programmed cell death.,PTM:Cleavages by caspase-3, caspase-8 or -10 generate the two active subunits.,similarity:Belongs to the peptidase C14A family.,subunit:Heterotetramer that consists of two anti-parallel arranged

heterodimers, each one formed by a 18 kDa (p18) and a 11 kDa (p11) subunit.,

Subcellular Location:

Cytoplasm . Nucleus .

Expression: Lung,Lymphocyte,T-cell,
