

Hrs (phospho Tyr216) Polyclonal Antibody

Catalog No: YP0132

Reactivity: Human; Mouse; Rat

Applications: WB;ELISA

Target: Hrs

Fields: >>Viral life cycle - HIV-1;>>Endocytosis;>>Phagosome

Gene Name: HGS

Protein Name: Hepatocyte growth factor-regulated tyrosine kinase substrate

Human Gene ld: 9146

Human Swiss Prot

Tullian Swiss Fro

No:

Mouse Gene ld: 15239

Mouse Swiss Prot

No:

Rat Gene ld: 56084

Rat Swiss Prot No: Q9JJ50

Immunogen: Synthesized phospho-peptide around the phosphorylation site of human Hrs

(phospho Tyr216)

O14964

Q99L18

Specificity: Phospho-Hrs (Y216) Polyclonal Antibody detects endogenous levels of Hrs

protein only when phosphorylated at Y216.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. ELISA: 1:10000. Not yet tested in other applications.

1/3

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 115kD

Cell Pathway: Endocytosis;

Background: The protein encoded by this gene regulates endosomal sorting and plays a

critical role in the recycling and degradation of membrane receptors. The encoded protein sorts monoubiquitinated membrane proteins into the multivesicular body, targeting these proteins for lysosome-dependent degradation. [provided by

RefSeq, Dec 2010],

Function: domain: Has a double-sided UIM that can bind 2 ubiquitin molecules, one on

each side of the helix.,function:Involved in intracellular signal transduction mediated by cytokines and growth factors. When associated with STAM, it suppresses DNA signaling upon stimulation by IL-2 and GM-CSF. Could be a direct effector of PI3-kinase in vesicular pathway via early endosomes and may regulate trafficking to early and late endosomes by recruiting clathrin. May concentrate ubiquitinated receptors within clathrin-coated regions. Involved in down-regulation of receptor tyrosine kinase via multivesicular body (MVBs) when complexed with STAM (ESCRT-0 complex). The ESCRT-0 complex binds ubiquitin and acts as sorting machinery that recognizes ubiquitinated receptors and transfers them to further sequential lysosomal sorting/trafficking processes.

May contribute to the efficient recruitment of SMADs to the

Subcellular Location:

Cytoplasm . Early endosome membrane ; Peripheral membrane protein ; Cytoplasmic side . Endosome, multivesicular body membrane ; Peripheral membrane protein . Colocalizes with UBQLN1 in ubiquitin-rich cytoplasmic

aggregates that are not endocytic compartments. .

Expression: Ubiquitous expression in adult and fetal tissues with higher expression in testis

and peripheral blood leukocytes.
