

Caspase-9 (phospho Ser196) Polyclonal Antibody

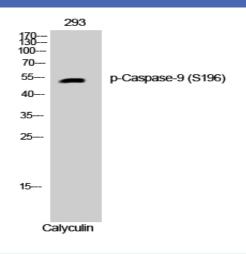

Catalog No :	YP0345
Reactivity :	Human;Rat;Mouse;
Applications :	WB;IHC;IF;ELISA
Target :	Caspase-9
Fields :	>>Platinum drug resistance;>>p53 signaling pathway;>>Pl3K-Akt signaling pathway;>>Apoptosis;>>Apoptosis - multiple species;>>VEGF signaling pathway;>>Thyroid hormone signaling pathway;>>Alzheimer disease;>>Parkinson disease;>>Amyotrophic lateral sclerosis;>>Huntington disease;>>Prion disease;>>Pathways of neurodegeneration - multiple diseases;>>Pathogenic Escherichia coli infection;>>Legionellosis;>>Toxoplasmosis;>>Tuberculosis;>>Hepatitis C;>>Hepatitis B;>>Measles;>>Human cytomegalovirus infection;>>Influenza A;>>Kaposi sarcoma-associated herpesvirus infection;>>Herpes simplex virus 1 infection;>>Epstein-Barr virus infection;>>Human immunodeficiency virus 1 infection;>>Pathways in cancer;>>Colorectal cancer;>>Pancreatic cancer;>>Endometrial cancer;>>Prostate cancer;>>Small cell lung cancer;>>Non- small cell lung cancer;>>Viral myocarditis;>>Lipid and atherosclerosis
Gene Name :	CASP9
Protein Name :	Caspase9
Human Gene Id :	842
Human Swiss Prot No :	P55211
Immunogen :	The antiserum was produced against synthesized peptide derived from human Caspase 9 around the phosphorylation site of Ser196. AA range:162-211
Specificity :	Phospho-Caspase-9 (S196) Polyclonal Antibody detects endogenous levels of Caspase-9 protein only when phosphorylated at S196.
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG

Best Tools for immunology Research	
Dilution :	WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:20000 IF 1:50-200
Purification :	The antibody was affinity-purified from rabbit antiserum by affinity-
	chromatography using epitope-specific immunogen.
Concentration :	1 mg/ml
Storage Stability :	-15°C to -25°C/1 year(Do not lower than -25°C)
Observed Band :	46kD
Cell Pathway :	p53;Apoptosis_Inhibition;Apoptosis_Mitochondrial;Apoptosis_Overview;VEGF;
	Alzheimer's disease;Parkinson's disease;Amyotrophic lateral sclerosis
	(ALS);Huntington's disease;Pathways in cancer;Colorectal
Background :	CASP9 encodes a member of the cysteine-aspartic acid protease (caspase)
	family. Sequential activation of caspases plays a central role in the execution-
	phase of cell apoptosis. Caspases exist as inactive proenzymes which undergo proteolytic processing at conserved aspartic residues to produce two subunits,
	large and small, that dimerize to form the active enzyme. Caspase 9 can undergo
	autoproteolytic processing and activation by the apoptosome, a protein complex
	of cytochrome c and the apoptotic peptidase activating factor 1; this step is
	thought to be one of the earliest in the caspase activation cascade. Caspase 9 is
	thought to play a central role in apoptosis and to be a tumor suppressor.
	Alternative splicing results in multiple transcript variants.
Function :	catalytic activity:Strict requirement for an Asp residue at position P1 and with a
	marked preference for His at position P2. It has a preferred cleavage sequence of
	Leu-Gly-His-Asp- -Xaa.,function:Involved in the activation cascade of caspases responsible for apoptosis execution. Binding of caspase-9 to Apaf-1 leads to
	activation of the protease which then cleaves and activates caspase-3.
	Proteolytically cleaves poly(ADP-ribose) polymerase (PARP).,function:Isoform 2
	lacks activity is an dominant-negative inhibitor of caspase-9.,online
	information:Caspase-9 entry,PTM:Cleavages at Asp-315 by granzyme B and at
	Asp-330 by caspase-3 generate the two active subunits. Caspase-8 and -10 can
	also be involved in these processing events., similarity:Belongs to the peptidase
	C14A family.,similarity:Contains 1 CARD domain.,subunit:Heterotetramer that consists of two anti-parallel arranged heterodimers
Subcellular	nucleus,mitochondrion,cytosol,apoptosome,
Location :	
	Ubiquitous, with highest expression in the heart, mederate expression in liver
Expression :	Ubiquitous, with highest expression in the heart, moderate expression in liver, skeletal muscle, and pancreas. Low levels in all other tissues. Within the heart,
	specifically expressed in myocytes.
