

NFκB-p105/p50 (phospho Ser337) Polyclonal Antibody

Catalog No: YP0594

Reactivity: Human; Mouse

Applications: WB;IHC;IF;ELISA

Target: NFKB1

Fields: >>Antifolate resistance;>>MAPK signaling pathway;>>Ras signaling

pathway;>>cAMP signaling pathway;>>Chemokine signaling pathway;>>NF-kappa B signaling pathway;>>HIF-1 signaling pathway;>>Sphingolipid signaling pathway;>>Pl3K-Akt signaling pathway;>>Apoptosis;>>Longevity regulating pathway;>>Cellular senescence;>>Osteoclast differentiation;>>Neutrophil extracellular trap formation;>>Toll-like receptor signaling pathway;>>Cytosolic DNA-sensing pathway;>>C-type lectin receptor signaling pathway;>>IL-17

signaling pathway;>>Th1 and Th2 cell differentiation;>>Th17 cell

differentiation;>>T cell receptor signaling pathway;>>B cell receptor signaling

pathway;>>TNF signaling pathway;>>Neurotrophin signaling

pathway;>>Prolactin signaling pathway;>>Adipocytokine signaling

pathway;>>Relaxin signaling pathway;>>Insulin resistance;>>Non-alcoholic fatty liver disease;>>AGE-RAGE signaling pathway in diabetic complications;>>A

Gene Name: NFKB1

Protein Name: Nuclear factor NF-kappa-B p105 subunit

P19838

P25799

Human Gene Id: 4790

Human Swiss Prot

No:

Mouse Gene Id: 18033

Mouse Swiss Prot

No:

Immunogen: Synthesized phospho-peptide around the phosphorylation site of human NFκΒ-

p105/p50 (phospho Ser337)

Specificity: Phospho-NFkB-p105/p50 (S337) Polyclonal Antibody detects endogenous

levels of NFkB-p105/p50 protein only when phosphorylated at S337.

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution : WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:40000.. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 105kD,50kD

Cell Pathway: T_Cell_Receptor; B_Cell_Antigen; Stem cell pathway; Toll_Like;

MAPK ERK Growth; MAPK G Protein; PI3K/Akt; Protein Acetylation

Background: nuclear factor kappa B subunit 1(NFKB1) Homo sapiens This gene encodes a

105 kD protein which can undergo cotranslational processing by the 26S proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex. NFKB is a transcription regulator that is activated by various intra- and extra-cellular stimuli such as cytokines, oxidant-free radicals, ultraviolet irradiation, and bacterial or viral products. Activated NFKB translocates into the nucleus and stimulates the expression of genes involved in a wide variety of biological functions. Inappropriate activation of NFKB has been associated with a number of inflammatory diseases while persistent inhibition of NFKB leads to inappropriate immune cell development or delayed cell growth. Alternative splicing results in multiple transcript variants encoding

different isof

Function: domain:Glycine-rich region (GRR) appears to be a critical element in the

generation of p50.,domain:The C-terminus of p105 might be involved in cytoplasmic retention, inhibition of DNA-binding, and transcription

activation.,function:NF-kappa-B is a pleiotropic transcription factor which is

present in almost all cell types and is involved in many biological processed such

as inflammation, immunity, differentiation, cell growth, tumorigenesis and apoptosis. NF-kappa-B is a homo- or heterodimeric complex formed by the Rellike domain-containing proteins RELA/p65, RELB, NFKB1/p105, NFKB1/p50,

REL and NFKB2/p52 and the heterodimeric p65-p50 complex appears to be most abundant one. The dimers bind at kappa-B sites in the DNA of their target genes and the individual dimers have distinct preferences for different kappa-B sites that

they can bind with distinguishable affinity and specificity. Diff

Subcellular Nucleus. Cytoplasm. Nuclear, but also found in the cytoplasm in an inactive form

complexed to an inhibitor (I-kappa-B).
