Background: The protein encoded by this gene is a major non-neuronal microtubule-

associated protein. This protein contains a domain similar to the microtubule-binding domains of neuronal microtubule-associated protein (MAP2) and microtubule-associated protein tau (MAPT/TAU). This protein promotes microtubule assembly, and has been shown to counteract destabilization of interphase microtubule catastrophe promotion. Cyclin B was found to interact with this protein, which targets cell division cycle 2 (CDC2) kinase to microtubules. The phosphorylation of this protein affects microtubule properties and cell cycle progression. Multiple transcript variants encoding different isoforms have been

found for this gene. [provided by RefSeq, Aug 2008],

Function: alternative products:Additional isoforms seem to exist,caution:The sequence

shown here is derived from an Ensembl automatic analysis pipeline and should be considered as preliminary data.,function:Non-neuronal microtubule-associated protein. Promotes microtubule assembly.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR (By similarity). Phosphorylation on Ser-787 negatively regulates MAP4 activity to promote microtubule assembly. Isoform 3 is

phosphorylated on Ser-337 and Ser-338., similarity: Contains 3 Tau/MAP

repeats., similarity: Contains 4 Tau/MAP repeats.,

Subcellular Location:

Cytoplasm, cytoskeleton. Cytoplasm, cytoskeleton, microtubule organizing center. Recruitment to microtubule is inhibited by microtubules polyglutamylation.

Expression : Bone marrow, Brain, Cerebellum, Colon

carcinoma, Epithelium, Eye, Heart, Liver, Lym
