

FGFR1/2 (Phospho Tyr730/733) Rabbit pAb

Catalog No: YP1827

Reactivity: Human; Mouse; Rat

Applications: IHC;WB

Target: FGF Receptor

Fields: >>MAPK signaling pathway;>>Ras signaling pathway;>>Rap1 signaling

pathway;>>Calcium signaling pathway;>>PI3K-Akt signaling

pathway;>>Adherens junction;>>Signaling pathways regulating pluripotency of stem cells;>>Thermogenesis;>>Regulation of actin cytoskeleton;>>Parathyroid hormone synthesis, secretion and action;>>Pathways in cancer;>>Proteoglycans in cancer;>>Prostate cancer;>>Melanoma;>>Breast cancer;>>Central carbon

metabolism in cancer

Gene Name: FGFR1 BFGFR CEK FGFBR FLG FLT2 HBGFR FGFR2 BEK

Protein Name: Fibroblast growth factor receptor 1 (FGFR-1) (EC 2.7.10.1) (Basic fibroblast

growth factor receptor 1) (BFGFR) (bFGF-R-1) (Fms-like tyrosine kinase 2)

(FLT-2) (N-sam) (Proto-oncogene c-Fgr) (CD antige

Human Gene Id: 2260

Human Swiss Prot P11362

No:

Mouse Gene ld: 14182

Mouse Swiss Prot

No:

Rat Gene ld: 79114

P16092

Rat Swiss Prot No: Q04589

Immunogen: Synthesized peptide derived from human FGFR1/2 (Phospho Tyr730/733)

Specificity: This antibody detects endogenous levels of FGFR1/2 (Phospho Tyr730/733)

Rabbit pAb at Human, Mouse, Rat

Formulation: Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.

Source: Rabbit,polyclonal

Dilution: WB 1:500-2000 IHC 1:50-200

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 120kD

Background: fibroblast growth factor receptor 1(FGFR1) Homo sapiens The protein encoded

by this gene is a member of the fibroblast growth factor receptor (FGFR) family,

where amino acid sequence is highly conserved between members and

throughout evolution. FGFR family members differ from one another in their ligand affinities and tissue distribution. A full-length representative protein consists of an extracellular region, composed of three immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a cytoplasmic tyrosine kinase domain. The extracellular portion of the protein interacts with fibroblast growth factors, setting in motion a cascade of downstream signals, ultimately influencing

mitogenesis and differentiation. This particular family member binds both acidic and basic fibroblast growth factors and is involved in limb induction. Mutations in

this gene have been associated with Pfeiffer syndrome, Jackson-Weiss

syndrome,

Function : catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine

phosphate..disease: A chromosomal aberration involving FGFR1 may be a cause

of stem cell leukemia lymphoma syndrome (SCLL). Translocation

t(8;13)(p11;q12) with ZMYM2. SCLL usually presents as lymphoblastic

lymphoma in association with a myeloproliferative disorder, often accompanied by pronounced peripheral eosinophilia and/or prominent eosinophilic infiltrates in the affected bone marrow.,disease:A chromosomal aberration involving FGFR1 may

be a cause of stem cell myeloproliferative disorder (MPD). Translocation t(6;8)(g27;p11) with FGFR1OP. Insertion ins(12;8)(p11;p11p22) with

FGFR1OP2. MPD is characterized by myeloid hyperplasia, eosinophilia and T-

cell or B-cell lymphoblastic lymphoma. In general it progresses to acute myeloid

leukemia. The fusion proteins FGFR10P2-FGFR1, FGFR10P-FGFR1 or

FGFR1-FGFR1OP may

Subcellular Location:

Cell membrane; Single-pass type I membrane protein. Nucleus. Cytoplasm, cytosol. Cytoplasmic vesicle. After ligand binding, both receptor and ligand are rapidly internalized. Can translocate to the nucleus after internalization, or by translocation from the endoplasmic reticulum or Golgi apparatus to the cytosol,

2/3

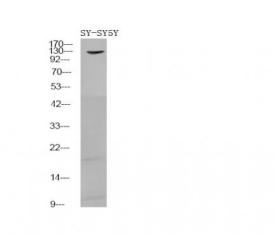

and from there to the nucleus.

Expression:

Detected in astrocytoma, neuroblastoma and adrenal cortex cell lines. Some isoforms are detected in foreskin fibroblast cell lines, however isoform 17, isoform 18 and isoform 19 are not detected in these cells.
