

Caveolin 2 (Phospho Ser23) Rabbit pAb

Catalog No: YP1843

Reactivity: Human; Mouse; Rat

Applications: IHC;WB

Target: Caveolin-2

Fields: >>Endocytosis;>>Focal adhesion;>>Prion disease;>>Bacterial invasion of

epithelial cells;>>Proteoglycans in cancer;>>Fluid shear stress and

atherosclerosis

P51636

Q9WVC3

Gene Name: CAV2

Protein Name: Caveolin-2

Human Gene Id: 858

Human Swiss Prot

No:

Mouse Gene Id: 12390

Mouse Swiss Prot

No:

Rat Gene Id: 363425

Rat Swiss Prot No: Q2IBC5

Immunogen: Synthesized peptide derived from human Caveolin 2 (Phospho Ser23)

Specificity: This antibody detects endogenous levels of Caveolin 2 (Phospho Ser23) Rabbit

pAb at Human, Mouse, Rat

Formulation: Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.

Source: Rabbit,polyclonal

Dilution : WB 1:500-2000 IHC 1:50-200

1/3

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 26kD

Location:

Background: caveolin 2(CAV2) Homo sapiens The protein encoded by this gene is a major

component of the inner surface of caveolae, small invaginations of the plasma membrane, and is involved in essential cellular functions, including signal transduction, lipid metabolism, cellular growth control and apoptosis. This protein may function as a tumor suppressor. This gene and related family member (CAV1) are located next to each other on chromosome 7, and express colocalizing proteins that form a stable hetero-oligomeric complex. Alternatively spliced transcript variants encoding different isoforms have been identified for this gene. Additional isoforms resulting from the use of alternate in-frame translation initiation codons have also been described, and shown to have preferential localization in the cell (PMID:11238462). [provided by RefSeg, May 2011],

Function: function: May act as a scaffolding protein within caveolar membranes. Interacts

directly with G-protein alpha subunits and can functionally regulate their activity.,function:May act as a scaffolding protein within caveolar membranes. Interacts directly with G-protein alpha subunits and can functionally regulate their activity. Caveolin-2 may function as an accessory protein in conjunction with caveolin-1.,online information:Caveolin entry,similarity:Belongs to the caveolin family.,subcellular location:Potential hairpin-like structure in the membrane. Membrane protein of caveolae.,subunit:Homodimer. Caveolin-1 and -2 colocalize and form a stable hetero-oligomeric complex.,tissue specificity:Expressed in

endothelial cells, smooth muscle cells, skeletal myoblasts and fibroblasts.,

Subcellular Nucleus. Cytoplasm. Golgi apparatus membrane; Peripheral membrane protein.

Cell membrane; Peripheral membrane protein. Membrane, caveola; Peripheral membrane protein. Potential hairpin-like structure in the membrane. Membrane protein of caveolae. Tyr-19-phosphorylated form is enriched at sites of cell-cell contact and is translocated to the nucleus in complex with MAPK1 in response to insulin (By similarity). Tyr-27-phosphorylated form is located both in the

cytoplasm and plasma membrane. CAV1-mediated Ser-23-phosphorylated form locates to the plasma membrane. Ser-36-phosphorylated form resides in

intracellular compartments...

Expression: Expressed in endothelial cells, smooth muscle cells, skeletal myoblasts and

fibroblasts.
