

CD86 (PN0420) Nb-FC recombinant antibody

Catalog No: YA0552

Reactivity: Human

Applications: ELISA

Target: CD86

Gene Name: CD86 CD28LG2

Protein Name: T-lymphocyte activation antigen CD86 (Activation B7-2 antigen) (B70) (BU63)

(CTLA-4 counter-receptor B7.2) (FUN-1) (CD antigen CD86)

Human Gene Id: 942

Human Swiss Prot

Immunogen:

No:

10:

Specificity: This recombinant monoclonal antibody can detects endogenous levels of CD86

protein.

P42081

Formulation: Phosphate-buffered solution

Source: Camel, chimeric fusion of Nanobody (VHH) and mouse IgG1 Fc domain,

recombinantly produced from 293F cell

Purified recombinant Human CD86

Dilution: ELISA 1:5000-100000

Purification: Recombinant Expression and Affinity purified

Concentration: Please check the information on the tube

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Cell Pathway: Cell adhesion molecules (CAMs);Toll_Like;Intestinal immune network for IgA

production; Type I diabetes mellitus; Autoimmune thyroid disease; Systemic lupus

erythematosus; Allograft rejection; Graft-versus-

Background:

This gene encodes a type I membrane protein that is a member of the immunoglobulin superfamily. This protein is expressed by antigen-presenting cells, and it is the ligand for two proteins at the cell surface of T cells, CD28 antigen and cytotoxic T-lymphocyte-associated protein 4. Binding of This protein with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of This protein with cytotoxic T-lymphocyte-associated protein 4 negatively regulates T-cell activation and diminishes the immune response. Alternative splicing results in several transcript variants encoding different isoforms. [provided by RefSeq, May 2011]

Function:

Receptor involved in the costimulatory signal essential for T-lymphocyte proliferation and interleukin-2 production, by binding CD28 or CTLA-4. May play a critical role in the early events of T-cell activation and costimulation of naive T-cells, such as deciding between immunity and anergy that is made by T-cells within 24 hours after activation. Isoform 2 interferes with the formation of CD86 clusters, and thus acts as a negative regulator of T-cell activation.,online information:CD86 entry,PTM:Polyubiquitinated; which is promoted by MARCH8 and results in endocytosis and lysosomal degradation.,similarity:Contains 1 Ig-like C2-type (immunoglobulin-like) domain.,similarity:Contains 1 Ig-like V-type (immunoglobulin-like) domain.,subunit:Interacts with MARCH8. Interacts with human herpesvirus 8 MIR2 protein (Probable). Interacts with adenovirus subgroup B fiber proteins and acts as a recept

Subcellular Location:

Cell membrane; Single-pass type I membrane protein.

Expression:

Expressed by activated B-lymphocytes and monocytes.
