Background: developmental stage:Widely expressed in fetal tissues.,function:Transcriptional

repressor which preferentially binds to the GC-rich consensus sequence

(5'-AGCCCCGGCG-3') and may regulate expression of TNF, EGFR and PDGFA. May control smooth muscle cells proliferation following artery injury through PDGFA repression. May also bind double-stranded RNA.,sequence caution:Contaminating sequence. Potential poly-A sequence.,similarity:Belongs to the LRRFIP family.,subunit:Interacts with FLII.,tissue specificity:Ubiquitously expressed.,
