

β-Arrestin 1 mouse mAb

Catalog No: YM1306

Reactivity: Mouse;Rat;Human

Applications: WB

Target: Arrestin 1

Fields: >>MAPK signaling pathway;>>Chemokine signaling

pathway;>>Endocytosis;>>Hedgehog signaling pathway;>>Dopaminergic synapse;>>Olfactory transduction;>>Relaxin signaling pathway;>>Parathyroid hormone synthesis, secretion and action;>>GnRH secretion;>>Morphine

addiction;>>Chemical carcinogenesis - receptor activation

Gene Name: arrb1

Human Gene Id: 408

Human Swiss Prot

No:

Mouse Swiss Prot

No:

Immunogen: Purified recombinant human beta Arrestin 1 protein fragments expressed in

E.coli.

P49407

Q8BWG8

Specificity: This antibody detects endogenous levels of beta Arrestin 1 and does not cross-

react with related proteins.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Monoclonal, Mouse

Dilution: wb 1:500

Purification: The antibody was affinity-purified from mouse ascites by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/2

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 50kD

Cell Pathway: MAPK_ERK_Growth;MAPK_G_Protein;Chemokine;Endocytosis;

Background: Members of arrestin/beta-arrestin protein family are thought to participate in

agonist-mediated desensitization of G-protein-coupled receptors and cause specific dampening of cellular responses to stimuli such as hormones,

neurotransmitters, or sensory signals. Arrestin beta 1 is a cytosolic protein and acts as a cofactor in the beta-adrenergic receptor kinase (BARK) mediated desensitization of beta-adrenergic receptors. Besides the central nervous system,

it is expressed at high levels in peripheral blood leukocytes, and thus the

BARK/beta-arrestin system is believed to play a major role in regulating receptor-mediated immune functions. Alternatively spliced transcripts encoding different

isoforms of arrestin beta 1 have been described. [provided by RefSeq, Jan 2011],

Function: function:Regulates beta-adrenergic receptor function. Beta-arrestins seem to

bind phosphorylated beta-adrenergic receptors, thereby causing a significant impairment of their capacity to activate G(S) proteins.,online information:Arrestin

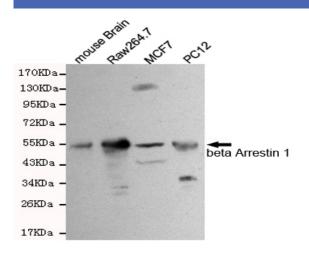

entry, similarity: Belongs to the arrestin family.,

Subcellular Location:

Cytoplasm. Nucleus. Cell membrane. Membrane, clathrin-coated pit. Cell projection, pseudopodium. Cytoplasmic vesicle. Translocates to the plasma membrane and colocalizes with antagonist-stimulated GPCRs. The monomeric form is predominantly located in the nucleus. The oligomeric form is located in the cytoplasm. Translocates to the nucleus upon stimulation of OPRD1 (By similarity).

Expression: Brain, Peripheral blood, Uterus,

Products Images

Western blot detection of beta Arrestin 1 in PC12,Raw264.7,MCF7 and mouse brain cell lysates using beta Arrestin 1 mouse mAb (1:500 diluted).Predicted band size:50KDa.Observed band size:50KDa.
