

Cyclophilin B Monoclonal Antibody(2B10), Cy5 Conjugated

Catalog No: YM2025

Reactivity: Human;Rat;Mouse

Applications : IF;WB;IHC;

Target: Cyclophilin B

Gene Name: PPIB

Protein Name: Peptidyl-prolyl cis-trans isomerase B (PPlase B) (EC 5.2.1.8) (CYP-S1)

(Cyclophilin B) (Rotamase B) (S-cyclophilin) (SCYLP)

Human Gene Id: 5479

Human Swiss Prot

No:

Specificity: Cyclophilin B Monoclonal Antibody(2B10) Cy5 Conjugated specially designed

for your Immunofluorescence analysis.

Formulation: Liquid in PBS, pH 7.4, containing 0.02% sodium azide as preservative and 50%

Glycerol.

P23284

Source : Monoclonal, Mouse IgG

Dilution: Optimal working dilutions should be determined experimentally by the

investigator. Suggested starting dilutions are as follows: IHC 1:50-300, IF

1:50-200.

Purification: The antibody was affinity-purified from mouse ascites by affinity-

chromatography using specific immunogen.

Concentration: 1mg/ml

Storage Stability: Stable for one year at -15°C to -25°C from date of shipment. For maximum

recovery of product, centrifuge the original vial after thawing and prior to removing

the cap. Aliquot to avoid repeated freezi

The protein encoded by this gene is a cyclosporine-binding protein and is mainly

1/2

Background:

located within the endoplasmic reticulum. It is associated with the secretory pathway and released in biological fluids. This protein can bind to cells derived from T- and B-lymphocytes, and may regulate cyclosporine A-mediated immunosuppression. Variants have been identified in this protein that give rise to recessive forms of osteogenesis imperfecta. [provided by RefSeq, Oct 2009],

Function:

catalytic activity:Peptidylproline (omega=180) = peptidylproline (omega=0).,caution:It is uncertain whether Met-1 or Met-9 is the initiator.,enzyme regulation:Cyclosporin A (CsA) inhibits CYPB.,function:PPlases accelerate the folding of proteins. It catalyzes the cis-trans isomerization of proline imidic peptide bonds in oligopeptides.,similarity:Belongs to the cyclophilin-type PPlase family. PPlase B subfamily.,similarity:Contains 1 PPlase cyclophilin-type domain.,subcellular location:Identified by mass spectrometry in melanosome

fractions from stage I to stage IV.,

Subcellular Location:

Virion . (Microbial infection).; Endoplasmic reticulum lumen . Melanosome . Identified by mass spectrometry in melanosome fractions from stage I to stage IV

(PubMed:17081065). .

Expression : Brain, Fetal brain cortex, Prostate, Skin,
