**Background:** alternative products: Additional isoforms seem to exist. Calcineurin A beta

isoform consists of at least two isoenzymes that may result from alternative splicing events, catalytic activity: A phosphoprotein + H(2)O = a protein +

phosphate.,cofactor:Binds 1 Fe(3+) ion per subunit.,cofactor:Binds 1 zinc ion per subunit.,function:Calcium-dependent, calmodulin-stimulated protein phosphatase.

This subunit may have a role in the calmodulin activation of

calcineurin.,similarity:Belongs to the PPP phosphatase family.,similarity:Belongs to the PPP phosphatase family. PP-2B subfamily.,subunit:Composed of two components (A and B), the A component is the catalytic subunit and the B

component confers calcium sensitivity.,
